Richa Mohan   3rd Decmeber, 2013

15-112

Section: J

RECOMMENDED CHANGES

Taryn Bipta:
- The **instructions** aren't clear, some of the instructions are vague and need to be more precise.*
- When the user rotates the window, he can't see where the solution appears, so the **text** should appear based on the current location of the user*

Rachel Ju:
- The user should be able to go back to the **program instruction** because there are a lot of functions and the user shouldn't be expected to remember them all*
- **Text** should change directions with user position*

Stanton Man:
- Instead of making a 2D image first, **directly make the cube/cuboid***

Mmchelnii(andrewid):
- If you want to show the 2D image turning into the 3D cube or cuboid, don't make a separate button, instead show the 2D image and turn it into the rubix cube with the same function*
- Make a different screen at the bottom of the main screen that always has instructions on it.
